

## 1. What is scrum/agile?

Agile software development is a group of **software methodologies** based on iterative development. Agile methods or processes generally promote a **disciplined project management** process that encourages frequent inspection and adaptation.

### What are Example of Agile Processes?

XP, Rup(Rational Unified Process),Scrum

### What is Scrum?

Scrum is a simple agile methodology for software development that are done in sprints. The Scrum team consists of the **Product Owner**, the **Scrum Master** and the **Development Team**.

### How Many types of Scrum Meetings are there?

There are 5 types of scrum meetings, they include

**Sprint Planning**-which are held at the beginning of each sprint

**Daily Scrum and Sprint Execution Meeting** - which are held at the same place everyday for 15 minutes

**Sprint Review Meeting** - Held after sprint execution is completed to provide a working product demonstration to the product owner.

**Sprint Retrospective Meeting** - held at the end of a sprint to evaluate and identify areas for improvement

**Backlog Refinement Meeting** - held prior to the next Sprint Planning Meeting to prepare the backlog for the next sprint.

## 2. What is a story point?

A story pointy is a relative unit of measure that is decided by and used by individual Scrum teams, to provide estimates of efforts for completing requirementt.

## 3. What is a story?

## 4. What is a daily standup?

A daily standup meeting is a daily scrum meeting that occurs everyday at the same time for about 15 minutes. This meeting involves the core scrum team standing up and answering 3 simple questions.

- 1.) What did you accomplish yesterday?
- 2.) What did you accomplish today?
- 3.) What is currently hampering your progress?

## 5. What is a grooming session?

also referred to as Product Backlog Grooming, is a method for keeping the backlog updated, clean and orderly. It is a basic process in Scrum. PBR is a collaborative discussion process which starts at the end of one sprint to confirm whether the backlog is ready for the next sprint.

## 6. What is sprint planning?

Sprint planning are daily meetings which allow the development team to organize their work based on the knowledge gathered from business priorities.

7. What is a sprint and how long are average sprints?

**Sprint reviews allow team members to evaluate previous work by recommending better practices with every sprint**

8. What are demo meeting for?
